/note="Organ: brain; Vector: pXX-A8c; Site 1: EccR I;
Site 2: Not I; The library was constructed according to Bonaldo, Lennon and Soares, Genome Research, 6:791-806,
1996. Denatured mRNa was size fractionated on a 1% agarose gel. First strand cDNA synthesis was primed with an oligo-fT primer containing a Not I site. Double stranded cDNA was size selected according to mRNA size fraction, ligated with EcoR I adaptor, digested with Not I, and then cloned directionally into pXX-Asc vector. The library tag sequence located between the Not I site and the polyA tail, is TGAGAGAGCC. This library was created for the University of Iowa Mouse Brain Molecular Anatomy Project (BMAP): 'Gene Discovery in the Developing Mouse Nervous System', supported by National Institutes of Mental Health (NIMH), Hemin Chin, Ph.D., program coordinator:"

/note="Organ: Eye; Vector: pXX- Asc; Site l: EcoR I;
Site 2: Not I; The library was constructed according
Bonaldo, Lennon and Soares, Genome Research, 6:791-806,
1996. Denatured RNA was size fractionated on a 1% agarcse
gel.First strand CDNA synthesis was primed with oligo-dT
primer containing a Not I site. Double strand CDNA was
size selected according to mRNA size fraction, ligated
with EcoR I adaptor digested with NotI and then cloned
directionally into pXX-Asc vector. The library tag
sequence located between the Not I site and the polyA tail
is TTATTGAAGT. This library was created for the University
lowa Brain Anatomy Project (BMAP): "Gene Discovery in the
Developing Mouse Nervous System", supported by National
Institute of Mental Health (NIMH), Hemin Chin, Ph.D.,
program coordinator."

```
The present sequence is Murine Lymph node Stromal cell kinase I (MLSK-1). This protein is useful for treating a variety of disorders listed in the disclosure of the specification, including autoimmune disorders, allergic reactions, myeloid or lymphoid cell deficiencies, wound healing and tissue repair and replacement, burns, incisions and ulcers, periodontal disease, inflammatory diseases, tumours and bacterial, viral or fungal
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Novel murine and human kinase nucleic acids useful for treating inflammations, infections, tumors, allergies, autoimmune diseases, and for stimulating or suppressing immune responses.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Murine; Lymph node Stromal cell kinase; MLSK-1; autoimmune disorder; wound healing; periodontal disease; inflammatory disease; tumour; infection; allergy.

The invention relates to an AMPK (AMP-activated protein kinase)-related
kinase designated SNARK polypeptides and polynucleotides. SNARK
(SNIF/AMP-activated protein kinase) is involved in stress response to
glucose deprivation. The polynucleotides are useful for expressing SNARK
protein in isolated form or as a protein conjugate. Activation of SNARK
confinitates liver CPT-1 thus enhances lipid metabolism in liver cells and
in other cell types such as heart and sheletal muscles, as well as
in other cell types such as heart and sheletal muscles, as well as
increases GLUT-4 and glycogen in muscle. Activation of SNARK is predicted
in other cell types such as leart and sheletal muscles, as well as
increases GLUT-4 and glycogen in muscle. Activation of SNARK is predicted
to have insulin-like effects that would enhance the disposal of glucose
to have insulin-like effects that would enhance the disposal of glucose
conne type of disorders of lipoprotein production leading to increased
some type of disorders of lipoprotein production leading to increased
levels of cholesterol or triglycerides. SNARK or its variants may be
administered to a subject to treat or prevent a disease associated with
decreased expression of SNARK, such as diabetes. SNARK antibodies are
used to modulate SNARK activity either in vivo for therapeutic purposes.
SNARK antagonists may be administered to increase fuel production,
decrease glucose uptake and increase levels of blood glucose in a patient
suffering from hypoglycaemia. The present sequence is rat SNARK protein
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               ETLGKGTYGKVKKARESSGRLVAIKSIRKDKIKDEQDLLHIRREIEIMSSLNHPHIIAIH 120

        The invention relates to primers for synthesising full length cDNA clones. 830 cDNA molecules encoding a human protein have been isolated and nucleotide sequences of 5'- and 3'-ends of the cDNA molecules have been determined. Primers for synthesising the full length cDNA are useful for clarifying the function of the protein encoded by the cDNA. The full length cDness were obtained by construction of full length enriched cDNA libraries that were synthesised by the oligo-capping method. The primers enable the production of the full length cDNA easily without any special methods. The present sequence is a polypeptide encoded by a full length human cDNA of the invention. Note: The sequence data for this patent did format directly from EPO
                                                                                                                                                                                                                                                       120
                                                                                                                                                                                                                                                                                                 180

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     The invention relates to an isolated polynucleotide (1) comprising a nucleotide sequence selected from any of 948 sequences (ABZ11119-ABZ12066) or their mature protein coding portion, active domain coding protein or complementary sequences. The polynucleotides are useful for identifying expressed genes or for physical mapping of human genome. The encoded polypeptides (ABP68902-ABP69849) are useful as molecular weight
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Ren
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Ξ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Zhao QA,

                                                                  ò
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     This invention describes novel polynucleotides and polypeptides isolated from human cDNA libraries which can be used for gene therapy or in vaccines. The polynucleotides of the invention and antibodies encoded by them may be used in the prevention, diagnosis and treatment of diseases associated with inappropriate polypeptide expression. The products of the invention may also be used to identify modulators of expression and activity and to down regulate expression and activity. The antibodies of the invention may also be used as diagnostic agents for detecting the presence of polypeptides in samples. This sequence represents a polypeptide described in the disclosure of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 300
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            360

The present invention relates to the isolation of a novel human protein
kinase designated 3700, and the polynucleotide sequence encoding it. The
invention also describes the use of a modulator of the activity of
protein kinase (PK) 3700 for making a medicament or pharmaceutical
composition for modulating the ability of a cell to phosphorylate an
enino acid residue of a substrate protein. Modulators of protein kinase
composition for modulating the modulating protein phosphorylation, cell
signalling, tumourigenesis, mitogenesis, transcription of a gene,
angiogenesis, tissue repair, tissue regeneration, establishment or
composition of atherosele. mitogenesis, transcription of a gene,
angiogenesis, tissue repair, tissue regeneration, establishment or
composition of atherosele. and polypeptide molecules for protein kinase
compositioning, diagnosing, preventing, inhibiting, alleviating, or
curing Pk-related disorders and cellular proliferative and/or
curing Pk-related disorders and cellular proliferative and/or
curing excoma, metastatic disorders or leukaemia). The 3700
curing carcinoma, sarcoma, metastatic disorders or leukaemia). The 3700
carcinoma, sarcoma, metastatic disorders or leukaemia). The 3700
cetect a genetic alteration in a 3700 gene, in chromosome mapping, for
tissue typing, in forensic biology, and as surrogate markers. The present
sequence represents human protein kinase 3700
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       120

Extracellular proteins play important roles in the formation, differentiation and maintenance of multicellular organisms. The fate of many individual cells (for example proliferation, migration or differentiation) is typically governed by information received from other cells and the immediate environment. The information is often transmitted by secreted polypeptides (for example mitogenic factors, survival factors, cyctoxic factors, differentiation factors, environments and hormones) which are received and interpreted by diverse

cell receptors or membrane bound proteins. These membrane bound proteins and receptors may be of use as pharmaceutical and diagnostic agents, such as in the blocking of receptor-ligand interactions. The current invention provides the amino acid sequences of novel human membrane bound receptors and proteins, along with the CDNA sequences encoding them. The novel proteins of the invention may have cytostatic activities through the stimulation of chondrocytes. The nucleic acids of the invention may be useful for the manufacture of a medicament for diagnosing or treating a tumour in a mammal. In addition, they may be useful for measuring or detecting the expression of a tumour associated gene. The present
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               360

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      The present invention relates to human Adenosine Monophosphate activated Protein Kinase (AMPK)-related kinase 5 (ARK5/ KIAA0537) and its coding sequence, which are useful for imparting stress resistance to cells. ARK5 is useful for treatment and prevention of tumours, nervous disorders, muscle disorders and ataxia teleangiectasia. The present sequence was used to illustrate the invention.

                                                                                         į
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        This invention relates to a novel primers useful for synthesising full length cDNA molecules that encode human proteins. Specifically, it refers to secretory or membrane proteins that are potential therapeutic agents/ target molecules in the field of medicine, and in particular genes encoding proteins that are associated with signal transduction, glycoproteins and transcription. The present invention describes a method for efficiently cloning a full length human cDNA from both the 5' and 3' ends using the oligo-capping method. This polypeptide sequence is a full length human protein of the invention.

                                                                                  30-JUL-1999
                                                                                         09-SEP-1999
                                                                                                                                                                                                                                                                             5-NOV-2001
                                                                                                                                                                                                                                                                                   30-JAN-2002
```

The invention describes an isolated 21910, 56634, 55053, 2504, 15977, 14760, 25501, 17903, 3700, 21529, 26176, 2644, 56638, 18610, 33217, 1967, h1983, m1983, 38555 or 593 nucleic acid molecule (I) comprising any one of 40 nucleotide sequences (I). The nucleic acid molecules and polypeptides are useful for diagnosing and treating a subject having a disorder, or a subject at risk of developing a disorder, which is associated with aberrant 21910, 56634, 55053, 2564, 15977, 14760, 25501, 17903, 3700, 21529, 26176, 26343, 56638, 18610, 33217, 21967, h1983, m1983, 38555 or 593 activity, such as cellular proliferative and/or

New 21910, 56634, 55053, 2504, 15977, 14760, 25501, 17903, 3700, 21529, 26176, 26343, 56638, 18610, 33217, 21967, h1983, m1983, 38555 or 593 nucleic acid molecules and proteins, useful for treating, e.g. cancer, heart failure and angina.

WPI; 2004-268788/25. N-PSDB; ADL14160, ADL14162.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            The invention relates to human PRO polypeptides and the polynucleotides encoding them. The polypeptides and polynucleotides are useful for treating and diagnosing immune related disorders in mammals. The immune related disorders include systemic lupus erythematosus, rheumatoid arthritis, osteoarthritis, juvenile chronic arthritis, systemic sclerosis, Sjogram's syndrome, vasculitis, sarchifis, systemic haemolytic anaemia, autoimmune thrombocytopenia, thyroiditis, diabetes mellitus, immune-mediated renal disease, demyelinating diseases of the central tor peripheral mervous system, demyelinating diseases of the Guillain-Barre syndrome and chronic inflammatory demyelinating polyneuropathy, polyneuropathy. This sequence represents a human PRO polypeptide of the

This invention relates to a novel isolated, enriched or purimical acid molecule that encodes a kinase polypeptide. Specifically, it relates to human tyrosine and serine/threonine protein kinase [PTK's and STK's], as well as protein kinase-like enzymes. The present invention describes screening methods to identify agonists, and targonists and antibodies that can be used to modulate the activity or function of the mammalian kinase enzymes. As such, these compositions can be used for gene therapy purposes to treat diseases or disorders including cancer, immune-related diseases, cardiovascular disease, brain or neuronal associated disease, metabolic and inflammatory disorders. Accordingly, they exhibit cycostatic, neuroprotective, immunomodulator and antinflammatory according a human kinase protein sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Э,

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      The present sequence is a novel protein kinase. The novel protein kinases and the nucleic acids that encode them may be used in the treatment and diagnosis of diseases associated with inappropriate kinase expression such as immune-related diseases and disorders, cardiovascular disease, neurodegenerative diseases and/or cancers. The nucleic acids and complementary sequences may also be used as DNA probes in diagnostic assays. The kinase polypeptides may be used as antigans in the production of antibodies of kinase expression and activity. Anti-kinase antibodies of and kinase expression and activity. Diseases related to kinase expression and activity include rheumatoid arthritis, atherosclerosis, autoimmune disorders, complications of organ transplanteation, myocardial infarction, immune disorders, cardiomyopathies, strokes, renal failure, oxidative-stress related disorders, chronic inflammatory bowel disease, chronic inflammatory pelvic disease, multiple sclerosis, asthma, osteoarthritis, psoriasis, rhinitis, autoimmunity, diabetes, cancers and reproductive

The invention relates to human kinase PKIN proteins and their corresponding cDNAs. A composition containing PKIN agonist is useful for treating a disease or condition associated with decreased expression of PKIN and a composition comprising PKIN antagonist is useful for treating a disease or condition associated with overexpression of PKIN. The disorders include cancer (leuksemia, adenocarcinoma, lymphoma, melanoma, allergies, adult respiratory distress syndrome, autocimmune thyroiditis, gout, bronchitis, crohn's disease, diabetes autoimmune thyroiditis, osteoparosis, Good pasture's syndrome, Graves' disease, costeoarthritis, osteoparosis, pancreatitis, pancriatis, pacciasis, cirrhosis, crhoumatoid arthritis, Sjogren's syndrome, uveitis, ulcerative colitis, bacterial, parasitic, fungal, viral, protezcal and helminthic infections) crowling's syndrome, hypothyroidism, cerebral palsy, cataracts), cardio vascular disease (arteriovenous fishula, hypertension, vasculitis, circhaemic heart failure, angina pectoris, myccarditis, is caneurysms, congestive heart failure, angina pectoris, myccarditis, is chancemic heart disease, chronic bronchitis, lung tumoure); lipid disorder (fatty liver, Palvy's disease, Niemann-Pick's disease, hypochity, hypocholesterolaemia, obesity). PKIN DNA is useful for assessing toxicity Human, kinase, PKIN-12; cancer, leukaemia, adenocarcinoma, osteoporosis, immune disorder, atherosclerosis, Crohn's disease, Hodgkin's disease, Acquired Immune Deficiency Syndrome, AIDS; Addison's disease, anaemia, 594 Human kinase PKIN-12 protein. AAE16266 standard; protein; (first entry)

26-MAR-2002

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Description
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Sequence 3

Sectine/threonine-specific protein kinase (EC 2.7.1.-) AK21 - Arabidopsis thaliana serine/threonine-specific protein kinase SNR1 homolog
C; Species: Arabidopsis thaliana (mouse-ear cress)
C; Species: Arabidopsis thaliana (mouse-ear cress)
C; Species: Arabidopsis thaliana (mouse-ear cress)
C; Accession: JC1446; S58266; S66334

A; Residues: 1-504 <GUN>
A; Cross-references: UNIPROT.P93113; EMBL:Y10036
A; Experimental source: cv. Masterpiece; cotyledon
C; Function:
A; Description: catalyzes the formation of peptidyl-serine-phosphate or peptidy
C; Superfamily: AMP-activated protein kinase; protein kinase homology
C; Keywords: ATP; phosphotransferase; serine/threonine-specific protein kinase
F; 6-260/Domain: protein kinase homology <KIN>
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       67

C.Genetics:
A.Gene: FOG2
C.Function:
A.Description: probably involved in the regulation of glucose-repressible gene expressic
C.Superfamily: AMP-activated protein kinase; protein kinase homology
                                                                                                                                                                                              17;
